EDUCATION

Wilfrid Laurier University

Waterloo, ON, Canada

Bachelor of Computer Science, Big Data Concentration

Sept. 2024 – April. 2028 (Expected)

- **Relevant Coursework:** Data Structures, OOP, Data Visualization, Discrete Structures, Calculus
- **Clubs:** Data Analytics Society - VP of Technology | Laurier Computing Society - VP of Finance

PROFESSIONAL EXPERIENCE

DOUBL

Toronto, ON, Canada

Junior Software Engineer

Jan 2026 – Present

- Developed a role-gated **GCP/Firebase** CMS with content validation checks and admin-only login, enabling live website content changes without redeployment and cutting update time from **2 hours to under 1 minute**.
- Engineered **Apple and Google Wallet** integration with server-side device detection and pre-fetching in **Next.js**, boosting pass lookup speed by **40%** and cold-start times by **35%** across iOS and Android for **1,000+** active users.
- Reduced spam emails by **91%** by implementing a tiered rate-limiting layer, IP-based throttling rules, and token validation middleware via **Resend API**, cutting unauthorized submissions by **94%** and total server load by **28%**.

OneChart

Waterloo, ON, Canada

Software Engineer Intern

Jan. 2026 – Apr. 2026

- Built a production-ready Scribe platform and **Chrome extension** for **50+** clinicians, with role-based permissions, session isolation, and **HIPAA** compliance, cutting administrative overhead by **63%** across all clinical workflows.
- Reduced documentation time by **78%** by integrating **Deepgram** and **Gemini APIs** into a real-time **WebSocket** transcription pipeline, achieving sub-**400ms** latency and enabling clinicians to review structured notes post-session.
- Engineered a PDF EMR autofill system using semantic matching to cross-reference patient notes and accurately fill in all form fields, with a live edit UI that instantly syncs all changes back to the PDF, cutting data entry by **82%**.

AvertoAI

Toronto, ON, Canada

Software Engineer Intern

May 2025 – Dec. 2025

- Built a full-stack food waste reduction platform with **Python** and **FastAPI**, connecting **3** supplier data sources to track and normalize purchasing data, reducing excess inventory orders by **25%** and cutting total prep time by **55%**.
- Designed and optimized a **PostgreSQL** database schema eliminating **1,200+** duplicate supplier records, reducing redundancy by **35%**, and exposing clean consistent data access across the entire platform via **RESTful APIs**.
- Improved API response speed by **43%** through targeted database indexing and query optimization, and built a **Python** validation layer enforcing business logic and rules across all supplier inputs, boosting data accuracy by **60%**.

PROJECTS

GreenLens AI | Next.js, TypeScript, Supabase, Recharts | 1st Overall, Data Minds Challenge 2.0

- Built a **6-agent pipeline** cutting ESG audit time by **68%** evaluating AI carbon, water, license waste, and ROI.
- Integrated **Microsoft Graph, Google Workspace, and OpenAI APIs**, reducing manual data collection by **72%**.
- Generated ESG PDF reports cutting analysis by **80%** using **z-score anomaly detection** and **OLS regression**.

A.U.R.A. | Next.js, Three.js, TypeScript, Vultr, PostgreSQL | Best Use of Vultr & Backboard, BearHacks

- Converted floor plans into full 3D environments via a **3-agent AI pipeline**, reducing conversion time by **87%**.
- Built a **Three.js** viewer with walk mode, object controls/editing, achieving sub-**50ms** render time via **TypeScript**.
- Deployed on **VPS** supporting **100+** concurrent jobs with Object Storage, **PostgreSQL**, and Load Balancing.

CareSync | React, Node.js, PostgreSQL, Auth0, Vultr | Best Use of Vultr, Hack Canada

- Built a full-stack platform for **3** user roles, eliminating **100%** of unauthorized access via **Auth0** and **PostgreSQL**.
- Automated medication risk monitoring for **200+** records by deploying nightly sentinel cron jobs to flag risks.
- Engineered an **AI agent** pipeline cutting shift handoff time by **73%** to auto-generate structured clinical briefings.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Java, R, C, C++, HTML, CSS

Frameworks & Libraries: React, Next.js, Three.js, FastAPI, Tailwind CSS, pandas, NumPy, scikit-learn, ggplot2

Tools and Technologies: REST APIs, Node.js, PostgreSQL, Google Cloud Platform, Supabase, Docker, Git, Vercel, Railway, VS Code, Cursor, Antigravity, Claude Code, Codex, Github Copilot, Microsoft Suite, Slack, Jira, Linear
