Professional Experience

Intact Financial Corporation

Toronto, ON, Canada

IT Technical Advisor Intern, Software Engineering & Integrations

Sep. 2026 – Present

- Focus on multi-system integrations, architecture, and cloud tooling across Java, Python, AWS, Kubernetes, and CI/CD.

DOUBL [Letter of Recommendation](#)

Toronto, ON, Canada

Junior Software Engineer Intern, Full-Stack

Jan. 2026 – Aug. 2026

- Led full-stack development of the Next.js platform as its **top contributor**, authoring **802 commits across 4 repositories** spanning recommendation, Shopify, Firebase/GCP, and analytics systems powering a shopping engine with Shopify data.
- Strengthened overall production security and reliability by remediating **2 critical and 32 high-severity vulnerabilities**, enforcing **TLS 1.3**, and root-causing and resolving a purchase-attribution failure affecting **3 Shopify partner stores**.
- Recovered **4,283 missing analytics rows** and repaired datasets missing up to **59% of events** by building a self-healing **Firestore/BigQuery** reconciler with scheduled automated repair workflows across five production analytics tables.

OneChart [Letter of Recommendation](#)

Waterloo, ON, Canada

Software Engineer Intern, AI Integrations & Backend

Jan. 2026 – Apr. 2026

- Built a production Scribe web platform and Chrome extension used by **50+ clinicians**, with role-based permissions, session isolation, and **HIPAA-aligned** handling of protected health data, reducing daily administrative work across clinical workflows.
- Integrated **Deepgram** and **Gemini APIs** into a real-time WebSocket transcription pipeline achieving **sub-400ms latency**, automatically drafting structured clinical notes that clinicians could review and edit instead of typing them from scratch.
- Cut manual clinician data entry by **85%** by engineering a PDF EMR autofill system using semantic matching to map patient-note content onto form fields, paired with a live edit UI that syncs clinician changes back to the PDF in real time.

AvertoAI [Letter of Recommendation](#)

Toronto, ON, Canada

Forward Deployed Engineer Intern

May 2025 – Dec. 2025

- Cut excess inventory by nearly **25%** across client sites by building a full-stack food-waste platform using **Python/FastAPI** that unified **3 disparate supplier data sources**, helping teams right-size supplier orders and reduce waste across operations.
- Improved data consistency across client rollouts by designing a **PostgreSQL** schema that removed **1,200+** duplicate supplier records, enforced referential integrity, and exposed reliable data to downstream production services through RESTful APIs.
- Improved database speed and ingestion reliability as client sites scaled by optimizing indexes and queries, then built a **Python validation layer** enforcing supplier rules and automatically rejecting malformed records before they ever reached the database.

Education

Wilfrid Laurier University

Waterloo, ON, Canada

Bachelor of Computer Science, Big Data Concentration

Sep. 2024 – Apr. 2028 (Expected)

- **Relevant Coursework:** Data Structures I & II, OOP, Data Visualization, Discrete Structures, Linear Algebra
- **Clubs:** Laurier Analytics Society - VP of Technology | Laurier Computing Society - VP of Finance

Projects

GreenLens AI | *Next.js, TypeScript, Supabase, OpenAI API* | **1st Overall, Data Minds Challenge 2.0**

- Built a **6-agent pipeline** evaluating AI carbon, water, license waste, and ROI, automating a previously manual ESG audit.
- Integrated **Microsoft Graph, Google Workspace, and OpenAI APIs** to automatically ingest enterprise ESG signals.
- Generated ESG PDF reports using **z-score anomaly detection** and **OLS regression** to flag outliers and surface trends.

TechTO | *Next.js, TypeScript, Python, MongoDB Atlas* | **Best Use of MongoDB Atlas, Hack the 6ix**

- Built a **Toronto digital twin** turning natural-language questions into simulations, Python analyses, and map actions.
- Generated **100,000+ Census-grounded simulated citizens**, modeling acceptance across demographics and neighbourhoods.
- Fine-tuned a GPU-backed **Qwen model** with **SFT and reinforcement learning** to predict weighted citizen reactions.

A.U.R.A. | *Next.js, TypeScript, Three.js, PostgreSQL, Gemini API* | **2x Sponsor Award Winner, BearHacks**

- Converted detailed floor plans into full 3D environments through a **3-agent AI pipeline** that automated each modeling stage.
- Built a custom Three.js viewer with walk mode and object editing, holding **sub-50ms** frame render times in TypeScript.
- Deployed on a cloud VPS with S3-compatible storage, **PostgreSQL**, and load balancing to handle **100+** concurrent renders.

Scout | *JavaScript, React, Node.js, Express, Gemini API* | **Sponsor Award Winner, HuskyHacks**

- Built a grounded retrieval engine that mines **9+** sources via **Google Search**, deduping and URL-validating every cited result.
- Engineered a persistent memory graph that runs **RAG-style** semantic recall over structured metadata to reuse prior research.
- Synthesized an opportunity gap and build plan with **Gemini**, hardened by **JSON** schema validation, retries, and fallbacks.

Technical Skills

Languages: TypeScript, Python, JavaScript, SQL, Java, C++, C, R, HTML, CSS

Frameworks & Technologies: React, Next.js, Node.js, FastAPI, Express, Three.js, WebSockets, Tailwind CSS

Cloud & Databases: Google Cloud Platform, AWS, PostgreSQL, Firebase, MongoDB Atlas, BigQuery, Supabase

Developer Tools: Git, Docker, GitHub Actions, Claude Code, Codex, Jira, Linear

AI APIs & Data: OpenAI API, Gemini API, pandas, NumPy, scikit-learn, statsmodels, ggplot2
