Professional Experience

Intact Financial Corporation

Toronto, ON, Canada

Software Architecture Intern, Software Engineering & Integrations

Sep. 2026 – Present

- Replacing a **business-critical enterprise architecture platform** by developing a **full-stack distributed system** across **6+ interconnected Podman microservices**, REST APIs, Redis-backed workflows, and 1,500+ enterprise data models.
- Engineering **cross-service orchestration and observability** by reverse-engineering model dependencies, integrating microservices, and implementing **Microsoft Sentinel logging** for incident triage, failure isolation, and end-to-end traceability.

Wilfrid Laurier University

Waterloo, ON, Canada

Research Engineer, Agentic AI

Sep. 2026 – Present

- Identified a novel research gap through **9 primary studies** in agentic finance, LLM memory, persuasion, and AI safety, formalizing a **3-condition experimental protocol** isolating vulnerability-aware memory from financial memory.
- Designing controlled experiments across **no-memory, financial-memory, and vulnerability-memory agents**, holding financial facts constant to quantify **advice suitability, psychological steering, and recommendation drift**.

DOUBL

Toronto, ON, Canada

Junior Software Engineer Intern, Full-Stack

Jan. 2026 – Aug. 2026

- Led development of the personalized shopping platform as the **top contributor**, shipping **800+ commits across 4 repositories**, authoring **120+** and reviewing **190+ PRs** spanning recommendation, Shopify, cloud, and analytics systems.
- Strengthened overall production security and reliability by remediating **2 critical and 32 high-severity vulnerabilities**, enforcing **TLS 1.3**, and root-causing and resolving a purchase-attribution failure affecting **3 Shopify partner stores**.
- Recovered **4,283 missing analytics rows** and repaired datasets missing up to **59% of events** by building a self-healing **Firestore/BigQuery** reconciler with scheduled automated repair workflows across five production analytics tables.
- Prevented recurrence of a production catalog failure that hid **8 live Shopify products** by eliminating manual publishing through an **OIDC-authenticated Cloud Scheduler** pipeline with validation, Slack alerts, and duplicate-safe syncing.

OneChart

Waterloo, ON, Canada

Software Engineer Intern, AI Integrations & Backend

Jan. 2026 – Apr. 2026

- Built and shipped an AI scribe platform and Chrome extension, serving **100+ clinicians** by engineering secure scalable production backend infrastructure, authenticated serverless APIs, multi-tenant access controls, and clinic-admin workflows.
- Achieved **sub-400ms transcription latency** by integrating **Deepgram Nova Medical** and **Gemini** through authenticated serverless APIs, adding diarization, multilingual transcription, and model fallbacks to harden clinical-note generation.
- Cut manual clinician data entry by **85%** by engineering a **Gemini-powered PDF EMR autofill system** that semantically mapped note content to form fields, persisted reusable templates, and synchronized edits back to generated PDFs in real time.

AvertoAI

Toronto, ON, Canada

Forward Deployed Engineer Intern

May 2025 – Dec. 2025

- Cut excess inventory by nearly **25%** across client sites by building a full-stack food-waste platform with **Python/FastAPI** that unified **3 disparate supplier systems** into production ordering workflows for frontline operational teams company-wide.
- Hardened multi-client rollouts by redesigning the **PostgreSQL data layer**, removing **1,200+ duplicate supplier records**, enforcing referential integrity, and exposing normalized data through production REST APIs for downstream systems.

Education

Wilfrid Laurier University

Waterloo, ON, Canada

Bachelor of Computer Science, Big Data Concentration

Sep. 2024 – Apr. 2028 (Expected)

- 9x Hackathon Winner** | Laurier Analytics Society - VP, Technology | Google Developers Group - Finance Executive

Projects

Molecule | *TypeScript, Python, PostgreSQL, OR-Tools, OpenAI API* | **GitHub Universe Finalist, Hack the North 2026**

- Architected an **AI commerce OS** turning plain-language requests into **solver-verified plans** for 8 Shopify stores.
- Hardened **self-healing runtime** with crash replay, worker locks, **zero duplicate Shopify writes**, and supplier failover.
- Scaled PostgreSQL to **5M order lines, 1.2M fulfillment samples**; queries **196x faster**, storage **9.9x smaller**.

TechTO | *Next.js, TypeScript, Python, MongoDB Atlas* | **Best Use of MongoDB Atlas, Hack the 6ix**

- Built a **Toronto digital twin** turning natural-language questions into simulations, Python analyses, and map actions.
- Generated **100,000+ Census-grounded simulated citizens**, modeling acceptance across demographics and neighbourhoods.
- Fine-tuned a GPU-backed **Qwen model** with **SFT and reinforcement learning** to predict weighted citizen reactions.

Technical Skills

Languages: TypeScript, Python, JavaScript, Java, Go, SQL, Ruby, C, R, HTML, CSS

Frameworks & Technologies: React, Next.js, Node.js, FastAPI, Express, Three.js, WebSockets, Tailwind, OpenAI API

Cloud/Data: GCP/AWS, PostgreSQL, Firebase, MongoDB Atlas, BigQuery, Supabase, pandas, NumPy, scikit-learn

Developer Tools: Git, Docker, Podman, GitHub Actions, Power Automate, Jira, Confluence, Devin, Claude Code, Codex, Linear
